COMPREHENSIVE TEXTILE CONTRACT

We equip hotel rooms, common areas, halls, restaurants and open areas. We manufacture the fabrics, do the tailoring and make the installation anywhere the world. We

make customised products and then adjust them for their installation, resulting in a professional and with no setbacks job.

DESIGN

PRODUCTION

TAILORING

INSTALLATION

GOOD SERVICE FOR THE CUSTOMER

We make customised products and then adjust them for their installation, resulting in a professional and with no setbacks job. Projects that need a quick response capacity and a thorough production control which adapts to the developer's requirements and schedules.

As the production process is concentrated, the developer's customer is able to centralize the whole project in one company, what simplifies and improves communication.

A benchmark in Textile and Contract

Comersan was founded in 1969 and has become one of the first textile brands to be well-known in Spain and with great international representation in over 80 countries. The newest weaving machines are concentrated in the

over 30,000 m2 premises (70 jacquards looms and heddles), digital printing, finishing, ennobling and tailoring, everything together with a highly qualified and multi skilled staff of 140 people.

WHAT **DISTINGUISHES** COMERSAN?

We are a vertical industry, with all the processes integrated (design, weaving, textile finishing, tailoring and installation), we adapt ourselves to the market demand and have a quick response capacity. We manufacture over 4000 textile references and our big stock of over 7 million € allow us to be quick and efficient. We work in over 80 countries.

Made in Spain

Comersan offers their customers the textile quality that results from a great control before, during and after each production process. On the other hand, it is a great local employment source.

R+D+I

Comersan technicians' constant research results in very innovative items, with excellent properties for industrial use regarding washing, pilling, abrasion and light resistance, by giving them Fire Retardant treatments, using Indanthren colouring, blackouts, resin treatments, Stain resistance finishing, textile built in technology like heating systems. These items become ideal for restaurant and hotel industry customers.

360° quality control

Comersan is in charge of each and every one of the product development processes, from the collection design to the final product packaging or its installation in the customer location.

This fact guarantees the high quality of the product.

COMPREHENSIVE SERVICE IN COMERSAN

Textile mill

Comersan owns over 60 active looms, among which there are Jacquard and heddle looms, ready to adapt to the developer needs concerning design and quality.

Having a present annual production of over 2 million metres makes us able to face any production challenge.

Besides, a department of textile engineering is in charge of the development of new qualities.

Printing and finishing process

In our premises we also have the necessary machinery to develop any design or specific colour, either by printing or dyeing.

We can also apply treatments or specific finishes that will add up special features to the fabrics, such as; Fire Retardant, Stain Resistant, Anti-bacterial, or repellent treatments...

Tailoring and installation

It is our aim to offer a comprehensive job of the textile products in the contract market. So, because of that, in our premises, there is a tailoring area where we make: curtains, bed spreads, cushions, bed throws, valances...

We also have a professional installation team who is able to move anywhere in the world and make a quick installation, always under a strict quality control and safety at work.

KIND OF **CURTAIN** TAPES

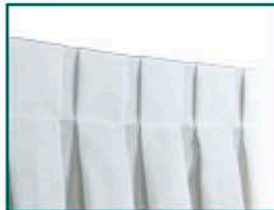

PENCIL PLEATED.

it consists of the most common and cheapest tape making. It also makes it easier to choose the curtain fullness as there is a great variety of clips.

BOX PLEATED.

The fullness of the curtain is determined by the width of the box pleat requested in the project. It is a more traditional finish with an elegant look.

EYELET.

In this case, the tape has several buttonholes that are finished with metallic rings and it is hung onto a rod instead of a rail.

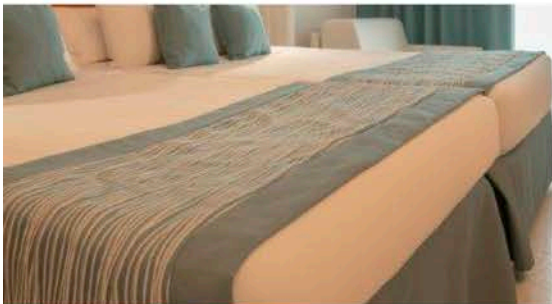

PERFECT WAVE.

This is the most up to date finish. It consists of a different mechanism on the rail that allows the curtain to blend into even waves unlike the pencil pleat. It is the most modern finish.

BED RUNNER FINISHES

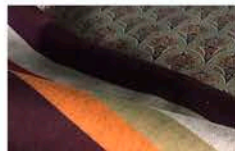

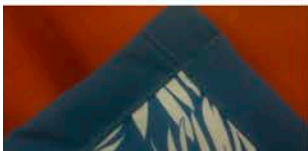

SIMPLE.

Simple side tailoring with an approximately 2 cm backstitch.

DOUBLE.

This finish consists of a front and back cover. The back cover can be made of fabric or padded lining, which is one of the most common choices.

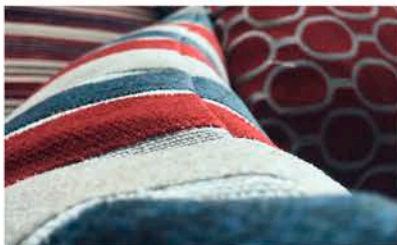

BIAS.

It is a trimming finish without cord, with plain coloured fabric on the bias selected by the developer.

GRECA (fabric joining).

By joining one fabric to another and forming a frame on the top and bottom side we get this finish. It gives us plenty of possibilities.

KINDS OF **CUSHION** FINISHES

SIMPLE.

Simple tailoring with hidden zip.

TRIM.

Cord trimming finish with hidden zip.

FRILL.

It consist of an extra fabric frame around the cushion cover.
